

Listing of Claims:

1. (Currently Amended) A medical image photographing system comprising:

an information management apparatus for readably holding photographing order information ~~having~~ which includes a patient ID particular to a patient ~~to which a photography of medical images is carried out~~ and radiographing conditions ~~having~~ radiographic including a body part for medical imaging, and for ~~sending~~ transmitting the photographing order information ~~outside~~ according to an inputted command;

a control apparatus for obtaining the photographing order information from the information management apparatus through a communication network; and

a portable terminal for displaying the photographing order information obtained from the control apparatus on a screen, obtaining the ~~information~~ patient ID relating to the particular patient out of the displayed photographing order information, obtaining a panel identification information particular to a radiographing panel to be used for ~~photographing a medical image of the patient~~ the medical imaging, and storing into a memory the obtained panel identification information ~~made~~ in correspondence with the photographing order information,

wherein the portable terminal has input keys for inputting
~~various~~ a plurality of commands [[,]] and inputs, ~~with~~ via input
operations by the input keys, a command to display on the screen
25 the photographing order information obtained from the control
apparatus, a command to obtain the ~~information~~ patient ID
relating to the particular patient out of the displayed
photographing order information, a command to obtain the panel
identification information particular to the radiographing panel
30 to be used for ~~photographing the medical image of the patient~~ the
medical imaging, and a command to store into the memory the
obtained panel identification information ~~made~~ in correspondence
with the photographing order information.

2. (Currently Amended) A medical image photographing system
comprising:

an information management apparatus for readably holding
photographing order information ~~having~~ which includes a patient
5 ID particular to a patient ~~to be photographed medical images~~ and
radiographing conditions ~~having radiographic~~ including a body
part for medical imaging, and for ~~sending~~ transmitting the
photographing order information ~~outside~~ according to an inputted
read command;

10 a control apparatus for obtaining the photographing order
information from the information management apparatus through a
communication network; and

 a portable terminal for displaying the photographing order
information obtained from the control apparatus on a screen,
15 obtaining the ~~information~~ patient ID relating to the particular
patient out of the displayed photographing order information,
obtaining ~~a~~ panel identification information particular to a
radiographing panel to be used for ~~photographing a medical image~~
~~of the patient~~ the medical imaging, and storing into a memory the
20 obtained panel identification information ~~made in~~ in correspondence
with the photographing order information,

 wherein the portable terminal has an input unit ~~capable of~~
~~being~~ which is adapted to be held with one hand and into which a
plurality of commands are inputtable ~~inputting~~ with ~~one~~ the hand
25 ~~for inputting various commands, and inputs, with~~ via input
operations by the input unit, including a command to display on
the screen the photographing order information obtained from the
control apparatus, a command to obtain the ~~information~~ patient ID
relating to the particular patient out of the displayed
30 photographing order information, a command to obtain the panel
identification information particular to the radiographing panel
to be used for ~~photographing the medical image of the patient~~ the
medical imaging, and a command to store into the memory the

obtained panel identification information ~~made in~~ in correspondence
35 with the photographing order information.

3. (Currently Amended) The system of claim 2, wherein the portable terminal displays the photographing order information on the screen so as to scroll ~~the display~~ according to a scroll command inputted by the input unit ~~capable of being held and~~
5 ~~inputting with one hand.~~

4. (Currently Amended) The system of claim 3, wherein the portable terminal exchanges ~~the~~ content displayed on the screen according to ~~a~~ an exchange command inputted by the input unit ~~capable of being held and inputting with one hand.~~

5. (Currently Amended) The system of claim 4, wherein the portable terminal deletes the obtained photographing order information from the memory according to a delete command inputted by the input unit ~~capable of being held and inputting~~
5 ~~with one hand.~~

6. (Currently Amended) The system of claim 2, wherein the ~~portable terminal further comprises an~~ the input unit includes a reading unit for reading which reads the panel identification information from the radiographing panel.

7. (Currently Amended) The system of claim 6, wherein the portable terminal ~~sends~~ transmits to the control apparatus the photographing order information ~~made in~~ in correspondence with the panel identification information, and erases from the memory the photographing order information already sent to the control apparatus.

8. (Currently Amended) The system of claim 2, wherein the portable terminal ~~further has~~ comprises a strap ~~capable of being hung with the terminal held.~~

9. (Currently Amended) The system of claim 2, wherein the portable terminal further comprises ~~other~~ an operational input member ~~than the input unit capable of being held and inputting with one hand,~~ and the operational input member ~~can be set~~ is settable to invalid inputting.

10. (Currently Amended) A medical image photographing system comprising:

an information management apparatus for readably holding photographing order information ~~having a~~ which includes patient ID IDs particular to ~~a patient to be photographed~~ medical images respective patients and radiographing conditions ~~having~~ radiographic part including respective body parts for medical

imaging, and for ~~sending~~ transmitting the photographing order information ~~outside~~ according to an inputted command;

10 a control apparatus for obtaining the photographing order information from the information management apparatus through a communication network; and

 a portable terminal for obtaining the photographing order information from the control apparatus and displaying the
15 photographing order information on a screen;

 wherein the portable terminal displays ~~a content having an a~~
first input screen for selectively inputting a particular patient ID ~~out of among the plurality of~~ patient IDs ~~comprised~~ in the photographing order information, and a ~~content having an~~ second
20 input screen for inputting a panel identification information particular to a radiographing panel for use in the medical photography ~~with respect to the~~ imaging of the patient whose particular patient ID ~~which is~~ selectively inputted. ~~and selected, selectively inputs the patient ID and inputs the panel~~
25 ~~identification information through each two input screens.~~

11. (Currently Amended) The system of claim 10, wherein the portable terminal can ~~transit the screen~~ move between ~~two the~~ first and second screens.

12. (Currently Amended) The system of claim 11, wherein the portable terminal displays as a reference screen the first input screen ~~for selectively inputting the particular patient ID out of the patient IDs.~~

13. (Currently Amended) The system of claim 12, wherein the portable terminal scrollably displays ~~two~~ the first and screens in at least one of a longitudinal direction ~~and/or~~ and a lateral direction.
